

) EYE-LCD M/W

INSTALLATION POSSIBILITIES FOR THE EYE-LCD M/W SERIES

) ADVANTAGES OF EYEVIS EYE-LCD M/W DISPLAYS

The displays from the EYE-LCD-M/W series are especially designed for the assembly of modular video wall systems. Thanks to their mini bezels and several optimised display characteristics they are perfectly suitable for applications in control rooms where they can be used even in continuous operating mode.

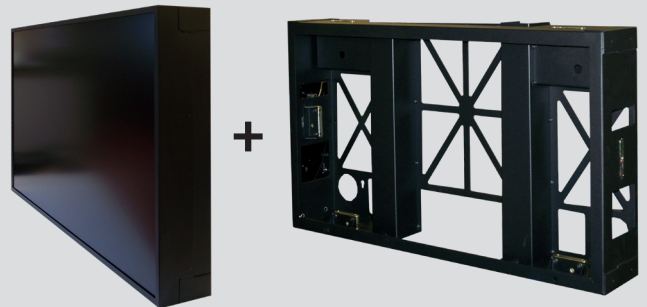

) EYE-LCD-W DISPLAYS

The standard version EYE-LCD-W of the displays has a robust, powder coated metal frame that enables the use of the displays in professional environments. The display frame has VESA approved holes on the backside that allow their quick and simple mounting in a video wall system.

) EYE-LCD-M DISPLAYS

M-Versions consist of the basic W-Version and a metal stacking frame. This option is especially designed for the assembly of 'tiled' video walls. The stacking frames allow for a simple and fast installation and deinstallation of the video wall. The individual stacking frames are fixed together with screws or optionally with snap closings. Special ventilation ducts guarantee optimal cooling of the device and to avoid overheating; a main cause for memory effects on LC displays.

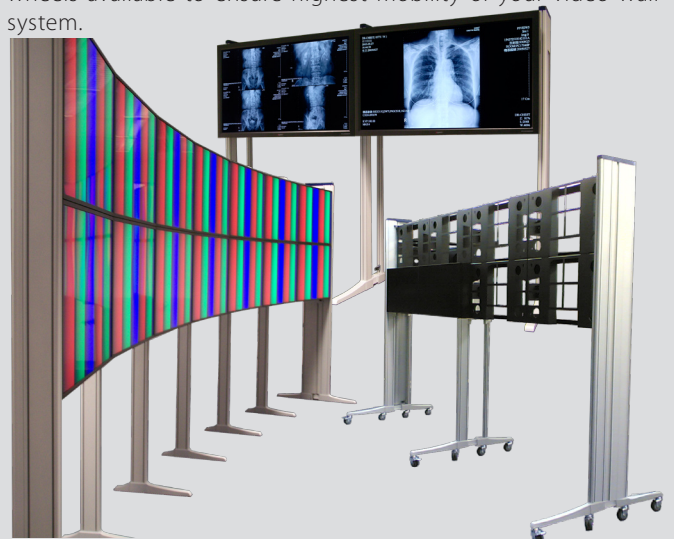

) WALLMOUNTS

Optionally eyevis provides wall-mounting kits for the displays from the EYE-LCD-M/W series. These wall-mounting kits include wall-mounting brackets that have to be fixed to the backside of the display and a hanger which is fixed to the wall.

) DISPLAY RACKS

eyevis also provides display racks for the displays of the EYE-LCD series. These racks are designed to build up freestanding video walls. Height and width of the display racks can be customised depending on the number of displays. The racks may also be set up in angled or curved arrangements. There are also racks with wheels available to ensure highest mobility of your video wall system.

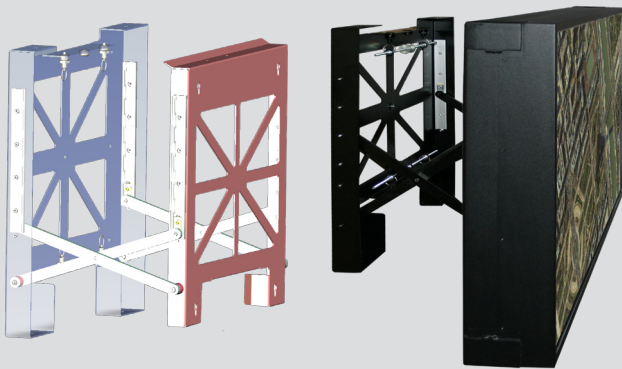

) EYE-LCD M/W

Installation Possibilities for the EYE-LCD M/W Series

) FRONT ACCESS OPTION

The displays from eyevis EYE-LCD W series are also available with front maintenance option. This new development allows taking of the display panel in a combined video wall without the necessity to demount the entire wall. With a special mechanism even displays in the middle of the wall can be made accessible for service and maintenance works.

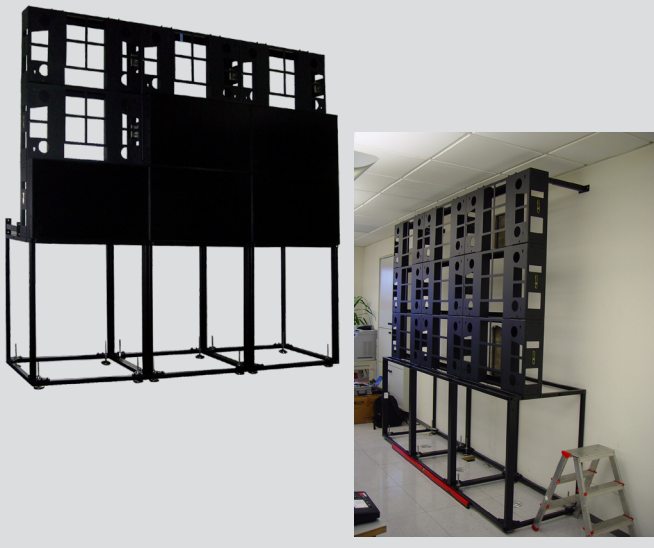

) CUSTOMISED FRAMES

eyevis philosophy is to fulfil our customers' demands as perfect as possible. Part of this is the design and construction of customised solutions for the installation of video wall systems into any environment. Thanks to the flexible design of our products these can be easily realised at a competitive pricing.

) STABLE BASE STANDS

These steel basements are adapted from the basements of the eyevis Cube series. In numerous installations world-wide they have proven their stability and reliability. With this solution, it is very simple to integrate the monitor wall into the interior design of a control room, for example. The basements can be covered with customised panelling.

Please do not hesitate to contact us, if you require further information, dimensional drawings, weights and measures of our installation possibilities.
